# Forensic Pathology Service: GA-RANKUWA: POST-MORTEM NO: DR PHOKENG 584/12

# AFFIDAVIT IN TERMS OF SECTION 212(8) ACT 51 OF 1977 AS AMENDED:

I, MATLOU ZACHARIA MOLOTO declare under oath:-

I am a <u>Chief Forensic Officer</u> in the Gauteng Department of Health, stationed at Forensic Pathology Service GA-RANKUWA.

In the performance of the my official duties in connection therewith and on 2012 / 08 / 22 I received the following sample(s) from DR NGUDE

# One DNA swab specimen(s)

0

- 1

While the specimen(s) was in my possession or control, it was kept in safe custody, seal kept intact and not interfered with.

On 2012 / 08 / 30 I handed the above specimen(s) to the investigating officer

No 90644310 Rank Tovering for Name Erence Making

**SIGNATURE OF I/O** 

The Dna was sealed with the official seal no (PA 5000486931)

1. I know and understand the contents of this declaration.

- 2. I have no objection to taking the prescribed oath.
- 3. I consider the prescribed oath to be binding on my conscience.

Place: FPS Ga-Rankuwa 2012/08/30

Signature of Chief Forensic Officer

I certify that the deponent has acknowledged that he/she knows and understands the contents of this declaration which was sworn to before me and the deponents signature was placed thereon in my presence.

Place: Ga-Rankuwa FPS Date: 20/2/08/ 30.

# REPUBLIC OF SOUTH AFRICA GAUTENG DEPARTMENT OF HEALTH

# REPORT ON A MEDICO LEGAL POST MORTEM EXAMINATION

Death Register No. 0585/2012

000496

To the magistrate of: RUSTENBURG

SE ON CHUIENG PROVINCE

I, RYAN BLUMENTHAL do hereby certify:

(i) that at THE MEDICO-LEGAL LABORATORY PHUKENG (MLL), on the 23<sup>rd</sup> day of August 2012 commencing at 08h00am I examined the body of an adult black male; and

(ii) that this body was identified to me -

- (a) by TP Sekhute of the MLL-Garankua, as being that of DR0585/2012; and
- (b) by SAPS 377 on 20/08/2012 as being that of MPHANGELI TUKUZA whose reputed/estimated age was 41 years, and

(iii) that death took place as informed on **16/08/2012** (the probable time of death was not determined due to refrigeration).

(iv) that the chief post mortem findings made by me on this body were the following: An adult black male with a fatal high-velocity perforating gunshot wound through-and-through the head. The gunshot entrance wound was located on the posterior aspect of the left earlobe and the gunshot exit wound was located over the left eye. Extrication of brain contents was present and the skull showed severe loss of anatomical architecture. Death was due to the perforating gunshot wound through the head.

Non-fatal projectile wounds to the body were also present: Multiple superficial shrapnel wounds were located overlying the right posterolateral aspect of the trunk and a single small malformed piece of shrapnel was found subcutaneously in the region. A perforating high-velocity gunshot wound injury through-and-through the left forearm was present which travelled from lateral-to-medial. A high-velocity gunshot entrance wound to the anterior aspect of the right knee was present with multiple small pieces of shrapnel located lodged within the right knee joint. And a single birdshot-type shotgun pellet entry was located on the posterior aspect of the left upper arm.

(v) that, as a result of my observations a schedule of which follows, I concluded that the **cause of death** was the following:

|                        | GUNSHUI  | I HEAD        |                    |  |

CHNSHOT HEAD

FORENSIC PATHOLOGY SERVICE: PRETORIA OFFICIAL POSTAL ADDRESS: PRIVATE BAG X323, ARCADIA 0007 Tel: (012) 323 5298 re/ms

# SCHEDULE OF OBSERVATIONS:

# 000497

GENERAL: An adult black male.

| 1. | Height:    | 1,68m.  |
|----|------------|---------|
|    | Mass:      | 65,0kg. |
|    | Physique:  | Normal. |
|    | Nutrition: | Good.   |

- 2. Special identifying features:
  - The decedent has short shaven scalp hair.
  - A circumferential beard and moustache is present with flecks of grey hair within the beard.
  - The second and third toes of the right foot are absent.
  - No further special identifying features can be identified.
- 3. Secondary post-mortem changes:
  - The body is in advanced stages of autolysis and secondary flaccidity is present

## 4. External appearance of body and condition of limbs:

(Please see attached Annexure A):

## 4.1 General:

- External examination shows an adult black male.
- At the outset of the examination the decedent was covered with multiple small flecks of grass.
- 4.2 Clothing:
  - A blue zipper jacket (Travis).
  - A horizontally-striped purple-and-grey golf shirt.
  - Green trousers.
  - · White socks.
  - Black boots with black laces.
  - Grey shorts (Octane).
  - White underpants (Tuo Lang).
  - A white beaded necklace surrounds the neck.
  - And two white beaded bracelets surround the wrists.

# 4.3 Gunshot entrance wound A:

- This wound is located posterior to the left earlobe.
- Examination shows a 0,7cm in diameter irregular lacerated wound defect with a subtle directional collar of abrasion.
- Due to the location of the wound (behind the left earlobe) the features appear somewhat atypical.
- Features are however in keeping with that of a high-velocity, relatively small calibre, gunshot entrance wound to the region.
- Examination of the surrounding skin and scalp hair shows no powder burns, stippling or tattooing.

Page 2 of 7

an Blumenthal

00049 Peath Register No. DR0585/2012

# 4.4 Gunshot exit wound A:

- Examination with a probe shows *gunshot entrance wound* A to exit in the region of the left eye.
- A large gaping open-wound defect is present which extends from the bridge of the nose upwards over the forehead and which includes both orbital regions of the skull. This large gaping wound defect measures 14,0cm x 12,0cm in size. In a separate clear plastic bag is present 548g of extricated brain tissue, together with fractured skull bone and scalp tissue.
- 4.5 Gunshot entrance wound B:
  - This wound is located on the lateral aspect of the left forearm.
  - Examination shows a 2,0cm x 1,5cm directional gunshot entrance wound
  - Examination of the surrounding skin shows no powder burns, stippling or tattooing.
  - Examination of the outer clothing layer shows no powder burns, stippling or tattooing.
  - Features are in keeping with that of a gunshot entrance wound to the region,

# 4.6 Gunshot exit wound B:

- This wound is located on the medial aspect of the left forearm.
- This wound is spaced 5,0cm proximal from gunshot entrance wound B.
- Examination shows a 1,2cm x 0,6cm lacerated wound which is in keeping with that of a gunshot exit wound to the region.

# 4.7 Shrapnel wounds - right posterolateral thorax and right posterolateral flank:

 Nine (9) shrapnel entrance wounds are present overlying the right posterolateral aspect of the thorax and right posterolateral aspect of the flank. Each wound measures approximately 0,7cm in diameter and all wounds are spaced approximately 9,0cm apart. None of these wounds penetrate into the thoracic cavity or abdominal cavity. A single piece of malformed shrapnel was located upon X-ray examination of the right lateral aspect of the thorax which has been saved as ballistic evidence (FSB-1050998).

# 4.8 Gunshot entrance wound C:

- This wound is located on the anterior aspect of the right knee.
- Examination shows a 0.7cm in diameter central concentric punched wound defect with a subtle surrounding collar of abrasion.
- X-ray examination of the right knee shows four pieces of irregularly-shaped shrapnel lodged deep within the right knee joint. Due to the depth of the shrapnel fragments, due to the fact that this was not a fatal wound and due to cosmetic reason - it was decided not to remove these shrapnel fragments from the knee joint.
- Features were in keeping with that of a high-velocity gunshot entrance wound to the region.

# 4.9 Further shrapnel wounds:

- Two superficial shrapnel injuries are located within the left popliteal fossa. X-ray examination shows no foreign bodies within the wounds. These wounds are consistent with tangential-type shrapnel injuries to the region.
- 4.10 Pellet entry A:
  - A single birdshot-type shotgun pellet entry is located on the posterior aspect of the left upper arm. X-ray examination of the region shows a single birdshot pellet lodged deep within the left triceps muscle. Extrication of this single birdshot pellet was not possible.

Page 3 of 7

an Blumenthal

- 4.11 Other findings:
  - A 2,0cm x 1,0cm fresh abrasion overlies the superior aspect of the left acromion.
- 4.12 Findings of fresh traditional healer marks are present:
  - Multiple, fresh, traditional healer marks are present on the anterior aspect of the neck; both pectoral regions; both anterior lower costal regions; both inguinal regions; the lateral aspect of the right knee, and the posterior of the left lower leg.

#### HEAD AND NECK

- 5. Scalp and skull:
  - Please refer paragraphs 4.3 and 4.4.
  - The gunshot entrance wound through the skull travels from left-to-right, from back-tofront, at an upward angle of trajectory. Extrication of brain tissue and scalp tissue is present. (In a separate clear plastic bag is present 548g of extricated brain tissue, together with fractured skull and scalp material). Only 602g of intracranial contents remains within the skull. The cranial vault and cranial base show multiple linear fractures. The left anterior cranial fossa shows severe loss of anatomical architecture (due to high-velocity projectile injury).
  - Features are in keeping with that of a high-velocity perforating gunshot wound injury through-and-through the head.
- 6. Intracranial contents:
  - Only 602g of brain tissue remains within the cranial cavity.
  - Within a separate clear plastic bag is present 548g of extricated brain tissue, together with fractured skull and scalp material.
- 7. Orbital, nasal and aural cavities:
  - Severe loss of anatomical architecture of the left anterior cranial fossa is present
- 8. Mouth, tongue and pharynx:
  - No abnormalities can be detected.
- 9. Neck structures:
  - No abnormalities can be detected.

#### CHEST

- 10. Thoracic cage and diaphragm:
  - Careful examination the thoracic cage shows none of the shrapnel wounds to penetrate into the thoracic cavity.
  - The diaphragm is grossly intact.
  - No rib fractures can be identified.
- 11. Mediastinum and oesophagus:
  - The oesophageal mucosa is pale.
- 12. Trachea and bronchi:
  - No abnormalities can be detected.

Page 4 of 7

Ryan Blu

- 13. Pieurae and lungs:
- No abnormalities can be detected. Lung mass: L: 466g R: 510g.
- 14. Heart and pericardium:
  - There is an increased amount of pericardial and epicardial fat present.
  - No abnormalities can be detected.

Heart mass: 346g.

15. Large blood vessels:

Haemolytic autolytic staining of the intima of the large arteries is present.

### ABDOMEN

## 16. Peritoneal cavity:

- The anterior abdominal fat wall thickness measures 2,5cm.
- No abnormalities can be detected.

17. Stomach and contents:

- The stomach contains approximately 100,0ml of white, creamy, pasty starch-like substance.
- The gastric mucosa appears normal.

18. Intestines and mesentery:

No abnormalities can be detected.

#### 19. Liver, gall-bladder and biliary passages:

- The liver is relatively pale and autolytic.
- The gall-bladder contains approximately 20,0ml of fluid bile and shows no abnormalities.

Liver mass: 1012g.

# 20. Pancreas:

- The pancreas is relatively pale.
- Autolysis is present.

Pancreatic mass: 114g

# 21. Spleen:

)

The spleen is pale and the capsule is wrinkled.

Autolysis is present.

Spleen mass: 52g.

#### 22. Adrenals:

- Bilateral autolysis is present.
- 23. Kidneys and ureters:
  - Both kidneys are autolytic and relatively pale.
  - Section shows increased medullary fat infiltration bilaterally.

Kidney mass: L: 90g R: 108g.

Page 5 of 7

Van Blumenthal

# 24. Urinary bladder and urethra:

No abnormalities can be detected.

# 25. Pelvic walls:

No abnormalities can be detected.

26. Genital organs:

- The penis appears uncircumcised.
- No abnormalities can be detected.

#### SPINE

- 27. Spinal column:
  - No abnormalities can be detected.

28. Spinal cord:

Not visualized.

I, <u>C. Marganezzi declare under oath:-</u>

I am a Forensic Officer in the Gauteng Department of Health, stationed at Forensic Pathology Service Ga-Rankuwa.

In the performance of the official duties in connection therewith and on  $\frac{20}{20} - \frac{23}{23}$  I received the following exhibit (s):  $\frac{1}{10} \frac{1}{10} \frac$ 

312 From DR Airtijoko

While the exhibit (s) was in my possession or control, it was kept in safe custody, seal kept intact and not interfered with.

On  $2\alpha = -\alpha \beta^{-} 2\beta^{-}$  I handed the above exhibit (s) to the <u>4</u> officer REF: <u>Type (1) (1) - </u>

The \_\_\_\_\_ was sealed with the official seal no <u>1X F1-6133</u>

1. I know and understand the contents of this declaration.

2. I have no objection to taking the prescribed oath.

3. I consider the prescribed oath to be binding on my conscience.

Place: FPS Ga-Rankuwa

------S-F.O.

I certify that the deponent has acknowledged that he/she knows and understands the contents of this declaration which was sworn to before me and the deponents signature was placed thereon in my presence.

# REPORT ON A MEDICO LEGAL POST MORTEM EXAMINATION

Death Register No. 0586/2012

To the magistrate of: RUSTENBURG

1, RYAN BLUMENTHAL do hereby certify:

(i) that at THE MEDICO-LEGAL LABORATORY OF GARANKUA on the 23rd day of August 2012 commencing at 08h30am I examined the body of an adult black male; and

(ii) that this body was identified to me -

(a) by TP Sekhute of the MLL-Garankua, as being that of DR0586/2012; and

(b) by Identification Book as being that of THOBISILE ZIBAMBELE whose reputed/estimated age was 38 years; and

(iii) that death took place as informed on 16/08/2012 (the probable time of death was not determined due to refrigeration).

(iv) that the chief post mortem findings made by me on this body were the following: An adult black male with a fatal penetrating high-velocity gunshot wound through the chest. This wound travelled from left-to-right, from front-to-back at a downward angle of trajectory It entered at the left shoulder, perforated through-and-through both lungs and resulted in a bilateral haemothorax.

A non-fatal, perforating, front-to-back, high-velocity gunshot wound through-and-through the right upper arm was present which fractured the proximal humerus bone. A non-fatal, penetrating, high-velocity gunshot wound, front-to-back, through the right side of the pelvis was present. Two projectiles were located lodged within the body and one single projectile was located upon removal of the clothing.

(v) that, as a result of my observations a schedule of which follows, I concluded that the **cause of death** was the following:

)

# SCHEDULE OF OBSERVATIONS:

# 000522

GENERAL: An adult black male.

| 1. | Height:    | 1.70m.   |
|----|------------|----------|
|    | Mass:      | 54kg.    |
|    | Physique:  | Muscular |
|    | Nutrition: | Good.    |
|    | Nutrition  | Good.    |

# 2. Special identifying features:

- The decedent has short shaven scalp hair.
- The left earlobe is pierced.
- A 3,0cm x 1,0cm longitudinally-orientated scar is located on the anterior aspect of the left proximal thigh.
- A 1,5cm in diameter hyperpigmented birth mark is located on the lateral aspect of the right upper arm.
- No further special identifying features can be identified.

## 3. Secondary post-mortem changes:

- The body has been refrigerated and secondary flaccidity is present.
- · The body is in the relatively late stage of autolysis.
- 4. External appearance of body and condition of limbs:

(Please see attached Annexure A):

- 4.1 General:
  - · External examination shows an adult black male.
  - At the outset of the examination the decedent was covered with multiple small flecks of grass.
  - A surgical dressing surrounded the left index finger which covered a 1,5cm x 0.5cm healing incised wound on the distal phalanx.

# 4.2 Clothing:

- Brown boots with brown shoelaces.
- · Brown tracksuit pants with a white drawstring.
- A South Africa green zipper tracksuit top ('Adidas South African Football Association') which is one quarter (1/4) of the way zipped-up to the top.
- A grey-and-black golf shirt.
- Black socks.
- Black gloves.
- Blue shorts ('Jockey')
- Black long johns.
- And orange underpants ('Hockey').
- Please note that upon removal of the green zipper tracksuit top a single piece of shrapnel was noted to be lying loose next to the body which has been saved as ballistic evidence (FSB-1051001).

# 4.3 Gunshot entrance wound A:

This represents the fatal wound to the body.

Page 2 of 7

Alwan Blumenthal

- A 0,6cm in diameter relatively concentric punched-out wound defect is present on the lateral aspect of the left shoulder.
- Examination of the outer clothing layer and surrounding skin shows no powder burns, stippling or tattooing.
- Features are in keeping with that of a high-velocity gunshot entrance wound to the region.

## 4.4 Projectile A:

 Projectile A is fragmented and is located lodged within the posterior aspect of the right thoracic cage wall. The largest fragment is located lodged within the seventh rib space on the posterior aspect of the right side of the thorax. This piece of shrapnel has been saved for ballistic evidence.

# 4.5 Gunshot entrance wound B:

- This wound is located on the anteromedial aspect of the right proximal thigh.
- Examination shows a 2,5cm x 1,5cm large, gaping, atypical wound defect.
- A subtle surrounding collar of abrasion can be identified.
- Examination of the surrounding skin shows no powder burns, stippling or tattooing.
- Examination of the outer clothing layer shows a corresponding defect with no powder burns, stippling or tattooing.
- Features are in keeping with that of an atypical (high-velocity) gunshot entrance wound to the region.

# 4.6 Projectile B:

)

- A malformed projectile is located lodged subcutaneously overlying the right buttock
- This projectile is located 4.0cm lateral-and-to-the-right of the posterior midline and 6.0cm superior-from-the right gluteal fold.
- This projectile has been handed in as ballistic evidence (FSB-1051000).
- 4.7 Gunshot entrance wound C:
  - · This wound is located on the anterolateral aspect of the right shoulder.
  - Examination shows a large gaping wound which measures 7.0cm x 4,0cm in size.
  - A subtle surrounding collar of abrasion can be identified
  - The underlying right proximal humerus bone shows a compound fracture together with associated flead storm on X-ray.
  - Examination of the surrounding skin and outer clothing layer shows no powder burns, stippling or tattooing.
  - Features are in keeping with that of an atypical high-velocity projectile entrance wound to the region.

# 4.8 Gunshot exit wound C:

- This wound is located on the posterior aspect of the right upper arm.
- This wound is located 7,0cm lateral-posterior-and-to-the-right from the right axilla fold.
- Examination shows a 1.5cm x 0,7cm irregular wound defect.
- · Features are in keeping with a gunshot exit wound to the region.

## 4.9 Shrapnel injury:

 An area of superficial shrapnel injury is present on the anterior aspect of the right lower leg. This area of shrapnel injury measures 14,0cm x 8,0cm in size. Multiple small puncture-like-shrapnel-wounds are present overlying the anterior aspect of the right lower leg. Each puncture-like-shrapnel-wound measures approximately 0,2cm in

diameter. These puncture-like wounds are spaced on average 1,0cm apart. A 1,5cm in diameter fresh abrasion is also present on the anterior aspect of the right lower leg.

# 4.10 Other findings:

- A 1.0cm laceration is located on the anterior aspect of the chin.
- Multiple fresh traditional healer marks are present overlying the body. These superficial fresh wounds are located overlying the jugular notch; both pectoral regions; the entire posterior aspect of the back; both elbows; both forearms; both thighs; both knee, both lower legs and the medial aspects of both ankles.
- At the outset of the examination a green whistle surrounded the neck.
- All wounds were noted to penetrate through-and-through the outer clothing layers.

# HEAD AND NECK

- 5. Scalp and skull:
  - Reflection of the scalp shows no abnormalities.
  - Examination of the skull shows no fractures.
- 6. Intracranial contents:

• Diffuse leptomeningeal congestion is present. Brain mass: 1506g.

- 7. Orbital, nasal and aural cavities:
  - Not visualized.
- 8. Mouth, tongue and pharynx:
  - No abnormalities can be detected.
- 9. Neck structures:
  - No abnormalities can be detected.

#### CHEST

- 10. Thoracic cage and diaphragm:
  - Gunshot wound path A enters the body on the left lateral upper shoulder region. This
    wound travels from left-to-right, from front-to-back at a downward angle of trajectory
    and penetrates and fractures the second rib on the lateral aspect of the left side of the
    thorax, enters the left thoracic cavity, perforates and fractures thoracic vertebrae T5
    and T6, enters the right thoracic cavity, and the fragmented projectile lodges deep
    within the seventh rib space on the posterior aspect of the right side of the thorax,
    above the level of the right dome of the diaphragm
  - Both thoracic cavities contain approximately 700,0ml of blood.
- 11. Mediastinum and oesophagus:
  - No abnormalities can be detected.
- 12. Trachea and bronchi:
  - No abnormalities can be detected.

Page 4 of 7

an Blumenthal

### 13. Pleurae and lungs:

- Gunshot wound path A travels from left-to-right, from front-to-back at a downward angle of trajectory through-and-through the left lung upper lobe and the right lung lower lobe.
- · Both lungs are relatively pale, collapsed and airless.

Lung mass: L: 232g R: 248g.

# 14. Heart and pericardium:

- A 3.0cm x 2.0cm subendocardial haemorrhage can be identified at the left ventricular outflow tract of the heart.
- No further abnormalities can be detected.

Heart mass: 288g.

15. Large blood vessels:

No abnormalities can be detected.

# ABDOMEN

• )

- 16. Peritoneal cavity:
  - The anterior abdominal fat wall thickness measures 1,5cm,
  - No further abnormalities can be detected.
- 17. Stomach and contents:
  - The stomach-and-contents weigh 1090g.
  - The stomach contains semi-digested, starch-like food rests.
- 18. Intestines and mesentery:
  - No abnormalities can be detected.
- 19. Liver, gall-bladder and biliary passages:

• The liver is relatively pale and autolytic. Liver mass: 1560g.

# 20. Pancreas:

Autolytic.

#### 21. Spleen:

• The spleen is pale and the capsule is wrinkled. Spleen mass: 122g

# 22. Adrenals:

Autolytic

### 23. Kidneys and ureters:

- Both kidneys are pale and autolytic.
- Section shows increase medullary fat infiltration bilaterally.

Kidney mass: L: 94g R: 84g

# 24. Urinary bladder and urethra:

No abnormalities can be detected.

Page 5 of 7

ann Laumonthal

#### 25. Pelvic walls:

 Gunshot wound path B travels from front-to-back at a relatively horizontal angel of trajectory through-and-through the pelvic cavity.

# 26. Genital organs:

• X-ray examination shows 'lead storm' located on the right lateral aspect of the testes.

# SPINE

)

- 27. Spinal column:
  - Gunshot wound path A perforates through-and-through the posterior aspect of thoracic vertebrae T5 and T6.

# 28. Spinal cord:

 Not visualized, however spinal cord injury should be suspected at the level of the perforating gunshot wound through-and-through thoracic vertebrae T5 and T6.

# SPECIMENS RETAINED:

| NATURE OF SPECIMENS  | NATURE OF INVESTI-<br>GATION REQUIRED                                | DISPOSAL OF SPECIMENS   |
|--|--|---|

Dt Rvan Blumenthal

Death Register No. DR0586/2012

# ADDITIONAL OBSERVATIONS:

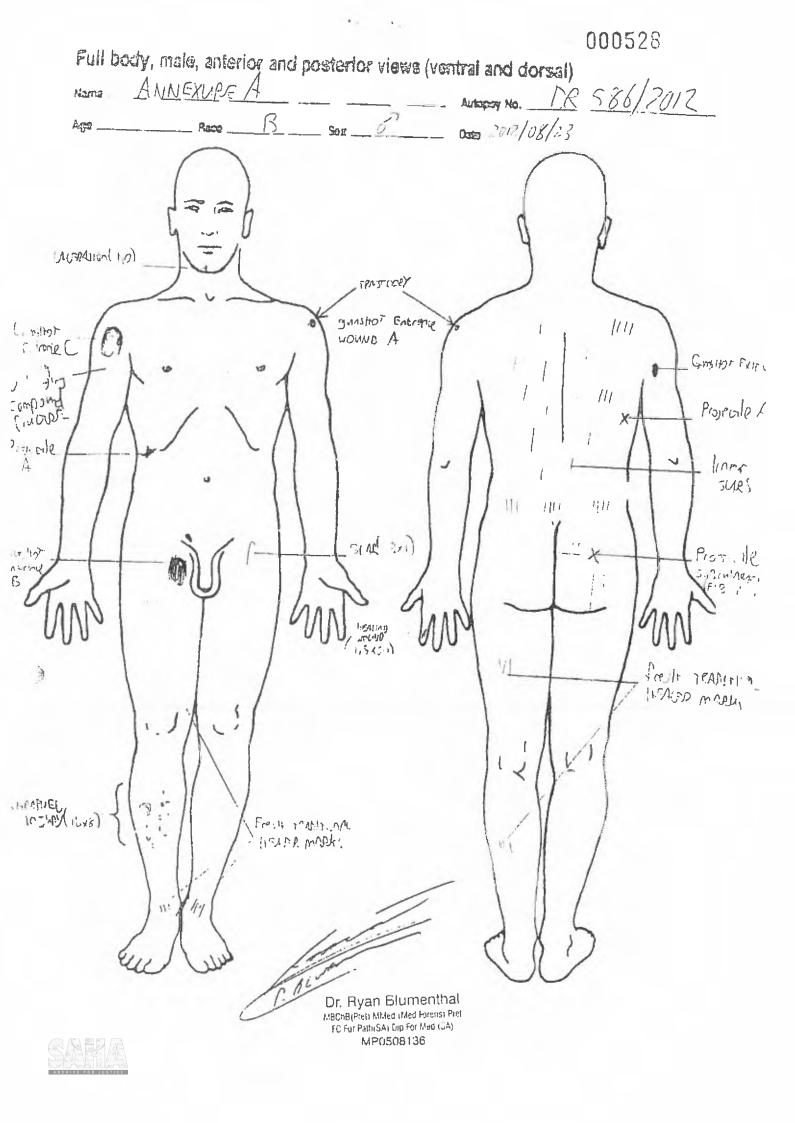

- DHA -1663 A07501081
- Please see attached Annexure A
- Whole body X-rays were performed.
- Lt-Col André Botha (Ballistics Service number: 04301722), HP Kruger (Forensics Silverton – Service number 04257758) and Const IJ Sekete (LCRC Brits – Service number: 7184886) attended the post mortem examination and took the necessary photographs
- Prof Steve Naidoo attended the autopsy examination in a watching brief capacity.

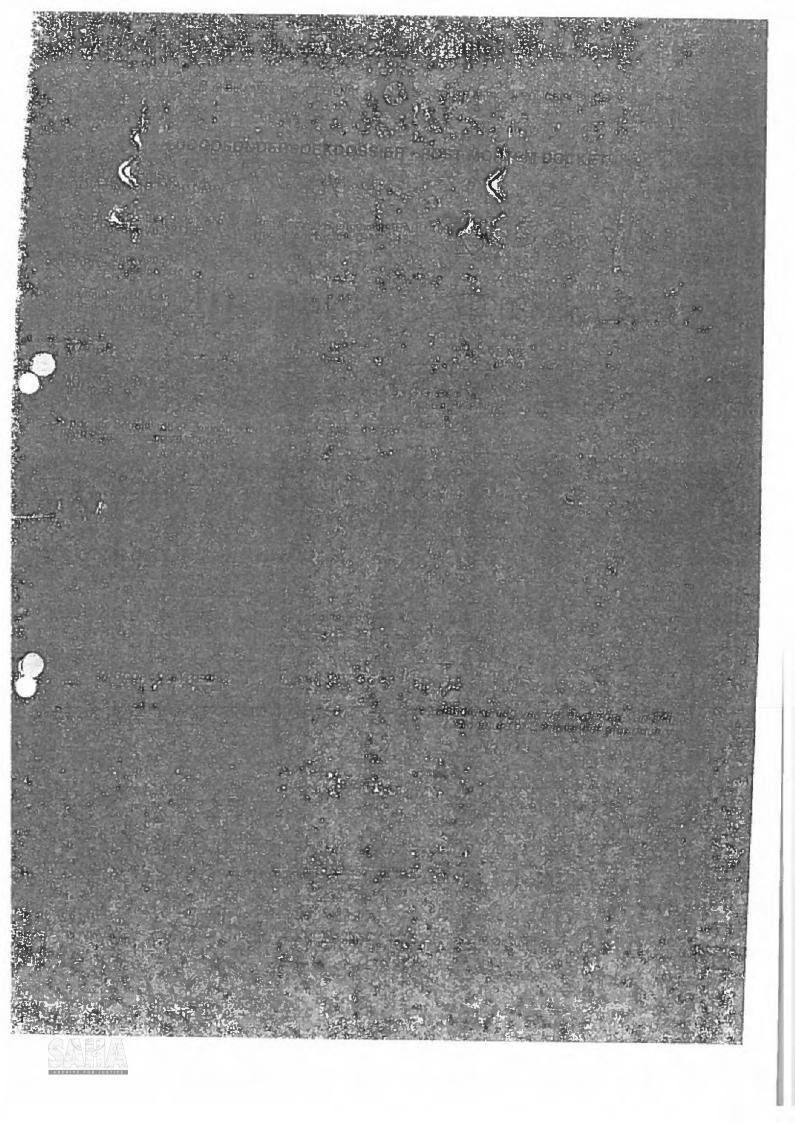

HISTOLOGICAL REPORT: None.
